

BUYING ETH

INFORMATIC

Q: Why do I need to buy ETH?

A: ETH are used to pay token swapping platforms a small trading fee and/or to add liquidity to the pool. The swapper faces a 0.3% fee to conduct swaps. This fee is split amongst all the liquidity providers in that specific pool based on how much of the pool they're offering. The more you offer, the more of the fee you collect. To place this fee in the real world, you only need a few cents worth of ETH to start trading!
