How to Speed Up or Cancel a Pending Transaction

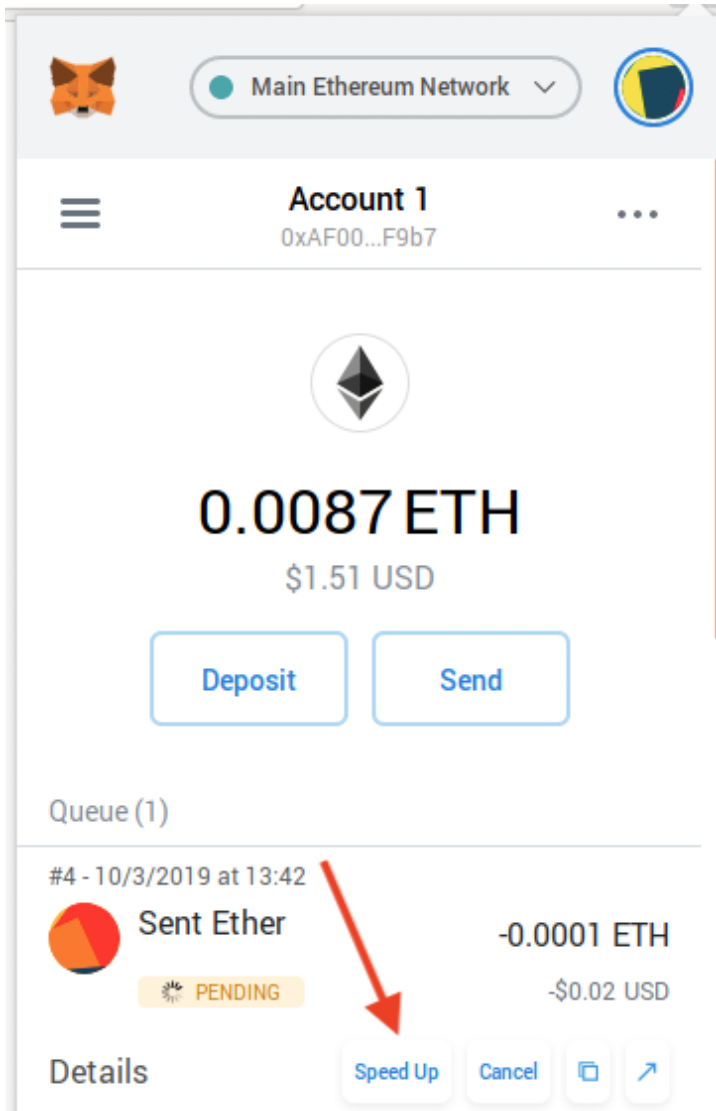

Justin Vuong

7 days ago · Updated

Whenever you submit a transaction on Ethereum, your gas price is a bid to the network to process your transaction sooner.

If you submit with a low gas price, you can find your transaction taking a long time to process!

In this case, you can either wait until the network is willing to process transactions at this price, or you can click that button that says "**Speed Up**". This will let you re-submit the same transaction, but for a higher fee that should be processed faster. To cancel the transaction, simply select "**Cancel**". Please note, a cancellation can only be attempted if the transaction is still pending.

For advice on what gas prices will be mined in a reasonable amount of time, refer to [Eth Gas Station](#).
